Mary Gates Set to Deliver Webinar on Bank Branch Protection

*Presentation to be Given to the Independent Bankers Association of Texas*

**Heath, Texas:** Mary Gates of GMR 410, LLC., a subsidiary of GMR Protection Resources, is set to present a webinar to the Independent Bankers Association of Texas (IBAT). The presentation, to be delivered on October 27<sup>th</sup>, is entitled, "Protecting Your Branches: Implementing a Risk Assessment Program to Safeguard Employees, Customers and Assets." Attendees will learn about:

- Physical security and crime risk assessments
- Why a Risk Assessment Program is needed
- Various approaches to the risk assessment process
- The 8 key elements to assess and mitigate risk

"All banks, bank facilities, bank customers, and employees are confronted with a certain level of risk concomitant with various threats," says Mary. "The threats may be the result of natural events, accidents, or intentional acts to cause harm and create havoc. Threat, vulnerability, and risk are terms that are inherent to security programs. But frequently, organizations get their meanings confused. Following this session, security managers will understand the relationships between threats, vulnerabilities, and consequences so they can effectively manage the impact of an event -- and manage the risk."

**About GMR 410:** We are a full-service, risk management security solution consulting firm. A diverse supplier, WBENC-certified woman owned and operated business, our Security Consultants help clients identify, remediate and monitor risk across their organizations. We provide insights and expert guidance to help clients manage uncertainty, improve performance and provide an independent lens to evaluate risk at properties across the U.S. or identify potential gaps in Security Programs. Headquartered in the Dallas/Fort Worth Metroplex, we are focused on safety and providing sustainable security system modernization, project and program management, customized analysis and a unique engagement to help clients make confident risk management decisions.
